1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-44, drawn to a cannula, classified in class 604, subclass 27.
 - II. Claims 45-64, drawn to a robotic fluid transfer system, classified in class 422, subclass 100.
 - III. Claims 65-76, drawn to a method of transferring fluids using a cannula, classified in class 436, subclass 180.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions III and I or II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process does not require the specifics of the apparatus for its practice and the apparatus can be used for a different method such as transfer of fluids in which there is no need to rotate the cannula.
3. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the cannula is only generally claimed. The subcombination has separate utility such as use in a fluid transfer that occurs by hand.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
5. During a telephone conversation with Brian P. Klein on November 29, 2004 a provisional election was made without traverse to prosecute the invention of Group III, claims 65-76. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-64 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: claims 1-64, non-elected without traverse, have been canceled

8. The following is an examiner's statement of reasons for allowance: the art of record fails to teach or fairly suggest the claimed method. The closest prior art is the newly cited Kettler reference (US 4,907,158) differing from the instant claims in the presence an angled cannula passage into which the cannula is inserted during the process of fluid transfer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additionally cited art relate to fluid transfer apparatus having a rotating pipette or cannula; robots used in fluid transfer apparatus and cannula.
